**(54) PREVENTIVE AND
THERAPEUTIC AGENT
AGAINST GLOMERULAR
DISEASE**

(57) Abstract:

PROBLEM TO BE SOLVED: To
obtain a preventive and therapeutic
agent against glomerular diseases
such as glomerulonephritis and
diabetic nephritis by formulating a

compound having effect for suppressing multiplication of mesangial cells and productive enhancement of extracellular substrates as an active ingredient.

SOLUTION: This medicine contains a 2-acylamino benzamide derivative of formula I {R1 is H, a halogen, hydroxyl group, a lower alkyl, etc.; R2 and R3 are each H and a lower alkoxy; X is vinylene, ethylene, etc.; R4 and R5 are each H, hydroxyl group, a halogen, etc.; Y is a group of -N(R6)(R7) (R6 and R7 are each H, a lower alkyl, an aralkyl, etc.), a group of -O-(CH₂)_m [m is an integer of 2-6], etc.} or its pharmacologically permissible salt as an active ingredient. The compound of formula I is obtained by reacting, for example, a carboxylic acid derivative of formula II (R10 is H, a halogen, etc.) with an 2-acylamino benzamide derivative of formula III [Y0 is a group of -N (R6)(R7) and the like] in an inactive solvent in the presence of a base.
